

To whom it may concern.

I am happy to be able to provide an endorsement for Syntech Biofuel Ltd and the biofuel they produce.

We started trialling Syntech ASB biofuel in our race truck and support vehicles around 3 months ago and the results were immediately encouraging. Performance in motor racing is obviously everything. No matter how skilled the driver or mechanical team, they can achieve nothing without engine performance and fuel is a key component.

We were delighted to see an immediate uplift in performance with our race telemetry showing an improvement of 3/10s per lap when compared with BP Ultimate. Syntech ASB is a drop in fuel, designed as a direct replacement for diesel while lowering harmful tailpipe emissions by 86% and unlike HVO which we have also tested with no loss of performance. The Worldwide Truck Racing Team are delighted to adopt

Syntech ASB as our fuel of choice for the entire fleet moving forward. From my perspective as a motor racing champion, I am really excited by the opportunity to collaborate with Syntech Biofuel. This will mean that I am the first driver on the circuit to adopt a fuel that unlike HVO is truly sustainable and made in the UK from UK feedstocks.

The team and I have taken a massive pioneering step in the right direction showing motor sport and the racing community that follows it that I can now race fast, sustainably and clean.

I hope this will lead the way for others to follow.
